Anthony Patch: The Mark of the Beast is Human DNA Reset by Quantum Computer to Make the Vaxxed into Chimeras
https://www.brighteon.com/eacd82dc-e140-4696-a019-e64c84430162

This is all about redesigning DNA in the computer. So, if anyone out there was thinking that I was in the realm of conjecture, or worse, in the realm of fantasy and science fiction, I'm just reporting to you their research. And it's not hard to extrapolate the application of their research to present expectations to you as to what they're doing.

It is the first time this important computation problem in bio-informatics is attempted on a quantum accelerator. When they say "accelerator", think "Operation Warp Speed". When they say "accelerator", understand the time in which we are in, the Reset. The false Reset. The counterfeit reset.

The accelerator is accelerating the ability to change the pattern of the human DNA. All of this information here – even though it was just published, is old news. It always is. You know that this is years in development, beyond any public release of this information.

So, in conclusion, the Mark of the Beast is the number, the image and the name. The name is DNA. The number is the sequence of the DNA. The name is the DNA. The number is the sequence of the DNA. And the image – we are created, fearfully and wonderfully, we are made in the image of God. Satan seeks to change that image and create an image of his own design.

So embedded in what I'm talking about here, of changing the pattern of DNA to match the pattern of the quantum computer, is that we always have to go down to electrons. Electrons of the DNA, electrons of the quantum processor, the qubit chipset. The q-bits, the quantum bits are electrons.[*] The quantum computers, its electrons within the computer, within the chipset are quantum entangled. That's the basis of quantum computing: quantum entanglement. Now you know why I named this magazine "Entangled".

The electrons within the DNA – it's not only the pattern of the DNA that's being changed, but the spin of the electrons – up-spin and down-spin. That, too, is a pattern of spin, electrons. So going beyond this paper and the previous one that I cited for the dodecahedral arrangement of DNA. Going beyond those papers is the examination of the spin of electrons. So the pattern of the spin of the electrons within the DNA – that spin of electrons, that pattern, must match the pattern of the electron spin in the quantum computer. When the patterns of electrons match one another, then they can become quantum entangled. And that is the line of communication, the DNA computer interface that takes place between the vaxxenated, post-Reset, under the Antichrist. That is the form of communication, the interface that takes place between those who took the Mark of the Beast and the quantum computer that is running the Beast system.

Why patterns? Because the quantum computer is a divinatory machine that is based upon pattern recognition, recognising patterns within data that is randomly generated by humans. That's the mechanism, that's the system of the Beast, random number generation, humans using computers, always – as we use them, we are randomly producing patterns. The quantum computer takes in that data, recognises those patterns.

That's how it operates. It's a pattern-recognition device, otherwise known as a divination machine.

For that machine that operates based upon pattern-recognition of data, it receives data from human DNA. The most efficient way to receive that information is not WiFi, but through quantum entanglement because it is instantaneous and entanglement is a phenomenon that takes place irrespective of distance between quantum-entangled elements. Electrons can be separated by any distance. That's irrelevant. And there is no time delay in the communication, often described in the literature as *teleportation* of information. There is no time delay in that teleportation of information. What is information? Information is the spin state, the intrinsic angular momentum of electrons. The spin state: up-spin and down-spin. That is what information is in Satan's binary world of 0 and 1. 0 is the down-spin and the up-spin in 1. That is information,

Through entanglement, entangled electrons share their state. They communicate their state to one another instantaneously. And if you measure one electron, thus changing it from, let's say, an up-spin to a down-spin, you affect that electron, simultaneously you're affecting the other, which was a down-spin but now an up-spin. The two share their states of spin. That is communicating electrons. "I'm a 1." "I'm a 0." We're talking to each other. That's entanglement. We're sharing our states. And because they're shared, as you affect one, you affect the other simultaneously and immediately.

For humans and for Satan, there is no better form of communication available. Thus there must be an identical pattern of electrons, the pattern of DNA, in order to entangle the DNA of humans that have taken the vaxxine with the control computer, quantum computer, 10th model, 10th generation composed of 65,536 qubits, which matches the number of dimers in the human brain, which matches the number of combinations of geomantic figures. That in itself is all a pattern – it's a trinity pattern, it's a triangular pattern, it is a tetrahedral pattern. And the computer is a 600-cell built of tetrahedrons, which is a counterfeit of God's model of the universe, arranging all energy, all fields, all matter into the configuration of tetrahedrons.

So in closing, the Mark of the Beast is the altering of the pattern of DNA that God prescribed, that God created, to a pattern that reflects the counterfeit, the chimera as in the days of Noah, the Reset pattern in DNA, DNA being reset. The DNA is being reset into a new form. I wouldn't even call it human. It's a chimeric form. So that, with the entanglement, these former humans, these chimera can be controlled. And it all begins by taking the Mark of the Beast.
